

1. Objective

To design and build a suite of Reports in Zoho Creator for the Event Registration application, demonstrating the nine Report Types (List, Spreadsheet, Kanban, Calendar, Map, Timeline, Pivot Table, Chart and Summary) so that the organizing committee, front desk, logistics team and session coordinators can view, analyze and act on registration data from multiple perspectives.

2. Problem Statement

A single default list cannot serve every stakeholder. Front desk needs quick check-in, logistics needs institution locations, coordinators need a day-wise schedule, and the committee needs summaries and charts to plan seating, kits and catering. Each stakeholder group therefore gets a purpose-built report on top of the registration form.

3. Report Type Mapping

Report Type	Report Name	Purpose
List View	All_Registrations_List	Searchable list of every registration, newest first
Spreadsheet View	Registrations_Spreadsheet	Editable grid for front-desk bulk updates
Kanban View	Registration_Status_Kanban	Draggable cards grouped by stage / track
Calendar View	Session_Schedule_Calendar	Participants per preferred session date
Map View	Participant_Institution_Map	Institution locations for logistics planning
Timeline View	Registration_Activity_Timeline	Registration momentum over time
Pivot Table	Track_By_ParticipantType_Pivot	Track vs participant type cross-tab
Chart View	Track_Popularity_Chart	Registrations per track as a bar chart
Summary View	Institution_Wise_Summary	Counts and team size per institution

4. List View - All_Registrations_List

The default landing report for the committee: a flat, searchable list of every registration.

- Columns: Participant Type, Name, Email (more available by scrolling).
- Search bar and filter icon for Event Track, Participant Type and Payment Status.
- Default sort: Registration Submitted On, descending.
- Footer shows "Showing 1 of 1" for the current sample data.

Participant Type	Name	Email
Student	KRISHNAAKHILESHWARAN AV 241501091	krishnaakhileshwaran.av.2024.aiml@raj.

5. Spreadsheet View - Registrations_Spreadsheet

An editable grid used by front-desk staff on event day for fast bulk data entry.

- Columns: Participant Type (inline dropdown), Team Size, Name, Email and more.
- Only Attendance Status, Payment Status and Kit Collected should be editable; other fields are read-only and restricted to the Front Desk role.

6. Kanban View - Registration_Status_Kanban

Registrations appear as draggable cards in columns so staff can see progress visually.

- In the current build, columns are grouped by Event Track (AI & Data Science, Cyber Security & Networking, Full Stack Web Development).
- The sample card (KRISHNAAKHILESHWARAN AV 241501...) sits under the Cyber Security & Networking Track; empty columns show "No Records".
- The specification groups by Status (Pending Payment / Confirmed / Checked-In / No Show); dragging a card should update the Status field with a timestamp.

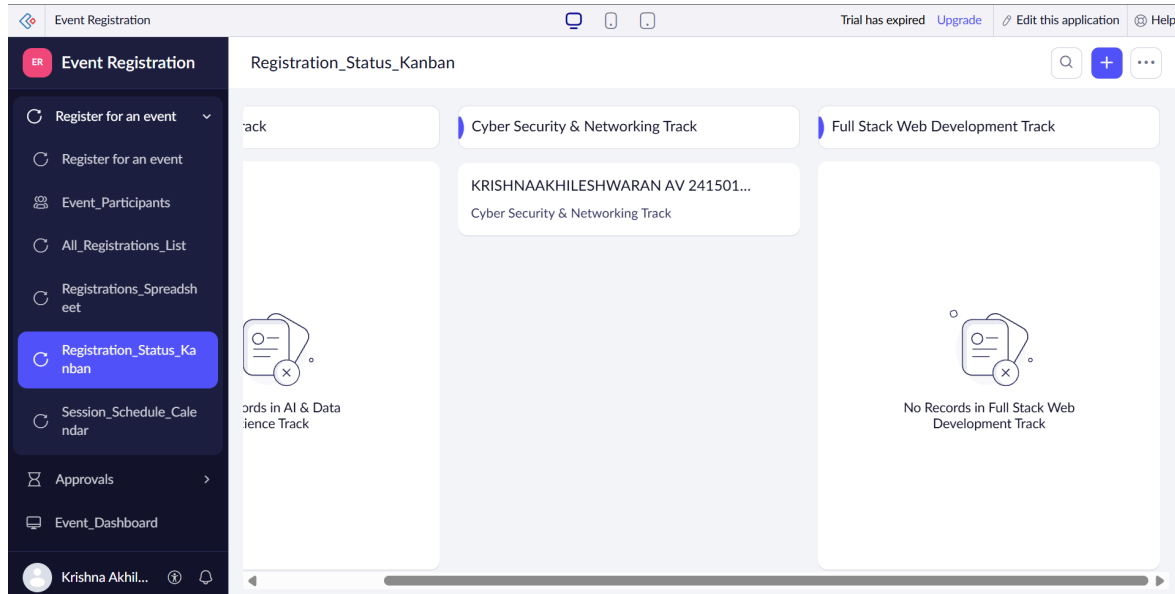

Figure 3: Registration_Status_Kanban with a card in the Cyber Security track

7. Dashboard and Chart Visuals - Event_Dashboard

The Event_Dashboard page summarises registration data with charts, supporting the Chart View (Track_Popularity_Chart) analysis.

- A counter widget shows "No of registrations" = 1.
- A gauge (scale 0 to 15) shows the current value of 1.
- A pie chart shows the share per track; currently 100% Cyber Security & Networking Track.

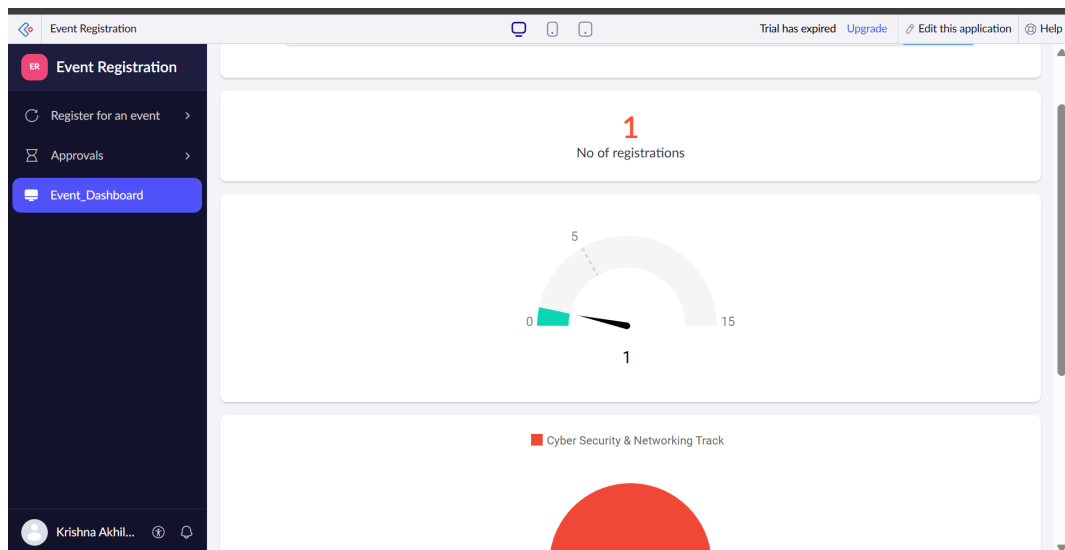

Figure 4: Event_Dashboard with registration counter, gauge and track chart

8. Remaining Report Configurations

- **Calendar View (Session_Schedule_Calendar):** based on Preferred_Session_Date; each day shows participant count and track breakdown; clicking a date drills into that day's participants; dates outside the event window are disabled.
- **Map View (Participant_Institution_Map):** based on a geocode-enabled Institution_Address; pins coloured by Event Track to help plan shuttles and outreach.
- **Timeline View (Registration_Activity_Timeline):** based on Registration_Submitted_On, grouped by day with cumulative count; refreshed daily.
- **Pivot Table (Track_By_ParticipantType_Pivot):** rows = Event_Track, columns = Participant_Type, values = count; blank cells shown as zero.
- **Chart View (Track_Popularity_Chart):** bar chart of registrations per Event_Track; auto-refreshes on each new submission.
- **Summary View (Institution_Wise_Summary):** grouped by College_Organization_Name (case-insensitive) with count of participants and sum of Team_Size for kit and seating planning.

9. Validation and Configuration Rules

- List: default sort by Registration Submitted On, descending.
- Spreadsheet: edit permission limited to Front Desk role; other fields locked.
- Kanban: card movement updates Status with a timestamp.
- Calendar: only event dates enabled.
- Map: Institution Address must be geocode-enabled.
- Timeline: refreshes daily.
- Pivot: blank cells displayed as zero.
- Chart: auto-refresh on new registration.
- Summary: case-insensitive grouping to avoid duplicate institutions.

10. End-to-End Workflow

- Participants submit the Event_Registration_Form.
- The committee monitors registrations in the list and timeline reports.
- Staff track progress in the Kanban view.
- Coordinators finalise hall allocation in the calendar view.
- Logistics uses the map and institution summary for transport, kits and seating.
- The committee reviews the pivot and chart for track capacity decisions.
- On event day, front desk records attendance and kit collection in the spreadsheet view.

11. Learning Outcomes

- Choosing the report type that fits each stakeholder's decision need.
- Configuring grouping, sorting and summary logic on one form.
- Using visual reports for faster operational decisions than raw tables.

- Using pivot tables and summary views for resource planning.

12. Conclusion

The reports suite gives every stakeholder a purpose-built view of the same registration data, from list and spreadsheet entry to kanban tracking and dashboard analytics, reducing manual effort and improving planning.
